## DRILLING COMMENCED AT BLICKS PROJECT

Anchor Resources Limited has commenced a diamond drilling program at its Blicks Project (EL 6465, Anchor 100%) in New South Wales.

This next phase of drilling will consist of a total of up to 8 holes for approximately 2,000 metres. The proposed drill holes consist of a combination of testing new targets and follow-up of existing known gold zones. Targets identified are coincident multi-element geochemistry and structure and/or multi-element geochemistry and magnetics. Targets to be tested are at the Tyringham East and Tyringham West gold prospects.

The Blicks Project (EL 6465 and EL 8100) is located in the southern portion of the New England Fold Belt in northeast New South Wales. Anchor is currently exploring in this area for large intrusion-related gold systems.

For further information on the Blicks Project please refer to Anchor's earlier announcements.

Ian Price

Managing Director
