Quarterly Activities Report – June 2012

HIGHLIGHTS

- Tyringham drilling results provide confidence in the postulated conceptual Intrusion-related Gold System model at the *Blicks Project*
- Gold mineralisation open in all directions at two locations at the Tyringham gold prospect
- High resolution helicopter magnetic-radiometric survey completed at the *Aspiring Project*
- Interpretation of survey data commenced for the *Aspiring Project*

***Blicks Project EL 6465 - (Anchor 100%)
New South Wales - Gold***

The Tyringham gold prospect consists of two spatially separate soil geochemical gold anomalies known as Tyringham West and Tyringham East centred 1.7km apart.

Two deep diamond core holes have been completed on the project, one into each of the gold anomalies. Progressive results have been previously reported in ASX releases dated 3 February 2012 and 6 March 2012, and the March 2012 Quarterly Activities Report to the ASX dated 24 April 2012.

In both holes multiple, long intervals of low grade gold mineralisation are associated with complex vein arrays, together with anomalous bismuth and tungsten geochemistry, and low sulphur values. The style of gold mineralisation, associated geochemical indicator elements, host rock association, and tectonic setting continue to provide confidence in the postulated geological model for reduced intrusion-related gold mineralisation at Tyringham.

A large low grade gold mineralised system is suggested with mineralisation open to the north, south, east and at depth.

Further work is required to identify vectors towards locating potentially higher grade gold zones within this large intrusion-related gold system.

Anchor also completed additional soil sampling to better define the margins of the gold anomalies at Tyringham. Assay results are pending.

***Aspiring Project EPM 14752 and EPMA 19447 (Anchor 100%)
North Queensland - Gold, silver, base metals (copper, lead, zinc)***

At the Aspiring project located north and east of Chillagoe in North Queensland, an examination of aeromagnetic data has identified a number of magnetic anomalies that closely resemble the magnetic signatures recognised over the Red Dome gold-copper and Mungana gold-copper-silver deposits, and other mineralised skarn deposits. These magnetic anomalies have not been investigated by modern exploration and sometimes display adjacent vein-style mineralisation suggestive of "leakage" mineralisation peripheral to the aeromagnetic anomaly.

An application for additional ground (see EPMA 19447 in Figure 1 below) surrounding the original exploration permit to cover extensions to known mineralisation and other magnetic anomalies of interest has been lodged with the Queensland Department of Employment, Economic Development & Innovation (DEEDI).

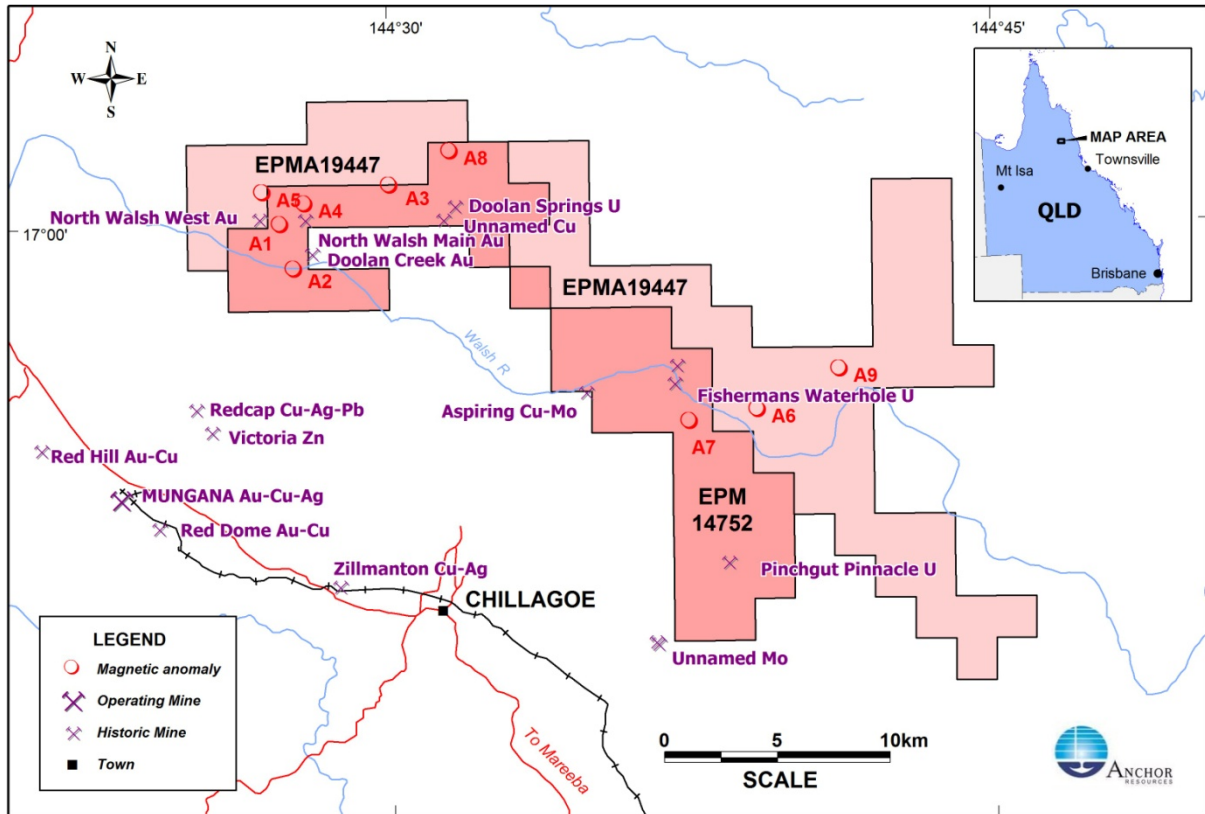

Figure 1: Existing EPM 14752 and application EPMA 19447

Anchor completed a high resolution helicopter-borne magnetic and radiometric survey over selected areas to better define the magnetic anomalies and geochemical targets of interest. Interpretation of data has commenced using geophysical consultants. Depending on results this program might be followed up by scout reverse circulation (RC) drilling to determine the source of the magnetic anomalies and their association with metallic mineralisation.

Corporate

Anchor is reviewing opportunities for the acquisition of new projects to expand its project portfolio.

The Company changed its registered office during the quarter, which is now located at G02, 59 Goulburn Street, Sydney NSW 2000.

Competent Person Statement

The information in this report relating to Exploration Results is based on information compiled by Graeme Rabone MAppSc, FAIG. Mr Rabone is Exploration Manager and a fulltime employee of Anchor Resources Limited. He has sufficient experience relevant to the assessment of the style of mineralization and type of deposit under consideration to qualify as a Competent Person as defined in the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves-The JORC Code". Mr Rabone consents to the information in the report in the form and context in which it appears.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of international Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
